

For your Gmail Add-on public Marketplace review, prepare these first:

Must-have website/product items

1. Product website
 - Example: [yourproduct.com](#)
 - Explain what your project-management tool does.
 - Include a clear Gmail Add-on section.
2. Privacy Policy — Required
 - Example: [yourproduct.com/privacy](#)
 - Explain what Gmail data you access, why, how you store/use it, and data deletion.
3. Terms of Service
 - Example: [yourproduct.com/terms](#)
4. Support page / support email
 - Example: [yourproduct.com/support](#)
 - Have a working email like support@yourproduct.com.
5. Product login/signup
 - Reviewer should be able to create/use an account and access the product.
6. Production backend
 - Your Gmail Add-on must call a real HTTPS production API, not localhost/staging.

Marketplace assets

7. App name + description
8. App logo/icon
9. 3–5 screenshots
 - Gmail email → Add-on → Create Task → Task created.
10. Demo/reviewer account
 - Give Google a working account with a demo workspace/project.
11. Reviewer instructions
 - Simple steps explaining exactly how to test the add-on.

In short

Product Website

- |— **Home**
- |— **Features**
- |— **Pricing (if applicable)**
- |— **Privacy Policy** ★
- |— **Terms of Service**
- └— **Support** ★

Google Cloud

- |— **OAuth Consent Screen**
- |— **OAuth Scopes**
- |— **Verification (if required)**
- └— **Marketplace SDK**

Gmail Add-on

- |— **Production deployment**
- |— **Production HTTPS backend**
- |— **Logo**
- |— **Screenshots**
- |— **Demo account**
- └— **Reviewer instructions**
